

InDemand has you covered across the continuum of care.

A complete suite of VRI products for any clinical environment.

We analyzed the needs of our clients across the continuum of care and designed VRI solutions that specifically support a broad range of products for every clinical setting, including: large touch screen carts that enable deaf patients to clearly see American Sign Language interpreters at a comfortable distance, small tablet devices (with or without rolling carts) for convenient VRI in tight spaces, and a range of audio options to cut through noisy surroundings.
